

Peel & Stick Radiant Heat for Tile Floors

INSTALLATION AND OPERATION INSTRUCTIONS

### CAUTIONS:

THIS EQUIPMENT SHALL BE INSTALLED ONLY BY QUALIFIED PERSONNEL WHO ARE FAMILIAR WITH THE CONSTRUCTION AND OPERATION OF THE APPARATUS AND THE RISKS INVOLVED.

THE INSTALLATION OF THIS HEATING PRODUCT SHALL BE IN ACCORDANCE WITH THE MANUFACTURER'S INSTRUCTIONS AND LOCAL AND NATIONAL CODES.

IN CANADA THE INSTALLATION SHALL BE MADE ACCORDING TO THE PROVISIONS OF SECTION 62 OF THE CANADIAN ELECTRICAL CODE. PART 1.

WARNING - AS DESCRIBED IN THESE INSTRUCTIONS, LEAD WIRES ARE NOT TO BE ROUTED OVER PADS OR COME INTO CONTACT WITH THE HEATING ELEMENTS AS DAMAGE TO SUPPLY CONDUCTOR INSULATION MAY OCCUR IF CONDUCTORS ARE ROUTED TO CONTACT HEATING ELEMENTS. REFER TO INSTALLATION INSTRUCTIONS FOR RECOMMENDED MEANS OF ROUTING SUPPLY CONDUCTORS.

THE TYPE AND THICKNESS OF FLOOR COVERING MATERIALS USED WITH THIS PRODUCT MUST NOT EXCEED A THERMAL INSULATION "R" VALUE OF 2.0.

CAUTION: USE COPPER ONLY AS SUPPLY CONDUCTORS. THERE ARE NO SPECIAL CRIMPING TOOLS REQUIRED FOR THIS PRODUCT.

### PEEL & STICK RADIANT HEAT FOR TILE FLOORS

# **INSTALLATION AND OPERATION**

The FloorHeat<sup>™</sup> Peel & Stick Radiant Heat system works just like the sun. When the thermostat calls for power, the heating element warms the floor's surface by providing radiant heat, the same type of heat that warms you on a cool spring day. Although the air is cool, the radiant heat from the sun keeps you warm.

The radiant heat warms your floor, and provides clean even heat throughout the room by uniformly warming the objects while providing thermal comfort. There is no need to directly over-heat the air. This is the opposite of how a conventional forced hot air or baseboard heating systems works. In other types of heating systems, the large mass of air in a home is heated while the objects and especially the outside walls remain relatively cool.

### **CAUTION**

Read and follow all the installation instructions in this manual before attempting to install FloorHeat<sup>™</sup> Peel & Stick Radiant Heat. Improper installation procedures or techniques can cause potentially unsafe conditions, including overheating and shock hazards.

Failure to comply with the instructions in this manual can void the manufacturer's warranty.

Electrical connections should only be made by licensed electricians.

The heating product shall not be installed in closets, over walls or partitions that extend to the ceiling, or over cabinets whose clearance from the ceiling is less than the minimum horizontal dimension of the cabinet to the nearest cabinet edge that is open to the room or area.

This product is not to be installed in contact with combustible surfaces. The intended use of this product is for floor warming underneath tile, stone and marble floor coverings.

### LIMITED WARRANTY

**FloorHeat™** warrants that, at the time of shipment to the customer who directly purchases the Product from **FloorHeatTM®**, the product will be free of defects in workmanship and materials and will conform in all material respects to any written specification that **FloorHeat** provided to that customer before the purchase.

If that customer believes that a shipment of product fails to satisfy the above warranty, that customer must (a) contact **FloorHeat** in writing within 10 years after that customer receives the shipment, including a detailed explanation of the alleged nonconformity and (b) return the shipment to FloorHeat postage prepaid. If **FloorHeat** reasonably determines through examination of the returned shipment that the shipment did not satisfy the above warranty, then AS **FloorHeat** EXCLUSIVE LIABILITY AND THE CUSTOMER'S SOLE REMEDY, **FloorHeat** WILL, WITHIN A REASONABLE PERIOD OF TIME, REPAIR THE PRODUCT, REPLACE THE PRODUCT WITH THE SAME OR SIMILAR PRODUCT, OR CREDIT THE CUSTOMER'S ACCOUNT WITH THE PURCHASE PRICE, WHICHEVER **FloorHeat** MAY ELECT IN ITS SOLE DISCRETION.

This warranty does not apply if **FloorHeat** reasonably determines that the product has been cut, added to or otherwise altered, stored improperly, misused, damaged, or installed not in accordance with the instruction manual supplied by **FloorHeat**. **FloorHeat** requires that this product be used ONLY with approved control devices. Use of any other control device will render the provisions of this warranty null and void. This warranty covers only components manufactured by **FloorHeat**. Components such as attaching hardware, connecting parts, wire, tape, and other items included in kits or assemblies that are not manufactured by **FloorHeat** are excluded from the provisions of this warranty.

Except as expressly provided in this Limited Warranty, the customer is responsible for the cost of labor, service calls, insurance, shipping, installation costs and any other expense or damage incurred.

THE FOREGOING WARRANTY IS IN LIEU OF ALL OTHER REPRESENTATIONS, WARRANTIES, OR CONDITIONS, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT, AND OF ANY OTHER OBLIGATION OR LIABILITY ON THE PART OF FloorHeatTM WHETHER BY STATUTE, CONTRACT, STRICT LIABILITY, TORT OR OTHERWISE.

Floorheat IS NOT RESPONSIBLE FOR ANY INCIDENTAL, CONSEQUENTIAL, MULTIPLE, PUNITIVE OR INDIRECT DAMAGES OR LOSS, LOSS OR DAMAGE TO OR LOSS OF USE OF FACILITIES OR OTHER PROPERTY, OR FOR LOST PROFITS OR LOST REVENUE, WHETHER BASED UPON WARRANTY, STATUTE, CONTRACT, STRICT LIABILITY, TORT OR OTHERWISE. Floorheat SHALL IN NO EVENT BE LIABLE FOR THE PERFORMANCE OF, OR COST OF PERFORMING, THE REMOVAL OR INSTALLATION OF THE PRODUCT OR ANY PRODUCT OR MATERIAL INTO WHICH IT IS INSTALLED, INCORPORATED OR ADDED. THE CUSTOMER IS RESPONSIBLE FOR THE COST OF LABOR, SERVICE CALLS, INSURANCE, SHIPPING, INSTALLATION COSTS AND ANY OTHER EXPENSE OR DAMAGE INCURRED.

IN NO EVENT SHALL **Floorheat**'s MAXIMUM LIABILITY EXCEED THE PURCHASE PRICE FOR THE RELEVANT SHIPMENT OF PRODUCT, EXCEPT TO THE EXTENT MADE MANDATORY BY LAW.

# SAFETY INFORMATION

Throughout the manual you will see Cautions and Notes. These notices highlight conditions, procedures, or other information that require special attention to prevent damage to the mats, to your flooring, or possible injury. For a safe and functional installation of FloorHeat™ Peel & Stick Radiant Heat, read and follow these important safety precautions. Failure to comply with these items may result in injury or damage to the mats.

This information must be read and understood by all technicians who will be working in the area of an installed FloorHeat Peel & Stick Radiant Heat or main electrical systems. Failure to follow these guidelines may result in a risk of electric shock or fire hazard.

Indicates precautions or procedures that should be followed to prevent the possibility of fire.

Indicates precautions or procedures that should be followed to prevent the possibility of electrical shock.

Indicates an item that you should pay special attention to. For example, notes are used to highlight installation tips.

### **CAUTION:**

Make sure that the jobsite is neat and clean before working with the mats. Nails, screws, and other sharp debris can damage the mats creating a potential shock hazard. Any mats which become torn or otherwise damaged must be discarded.

Ensure that the breaker supplying power to the heating mats has been turned off before making electrical connections.

When installing any other materials on or near a heated floor, ensure that no heating mats are punctured by nails, screws, etc.

Not for use in wet areas, such as showers. This system is only for use in areas considered dry locations by National Electrical Code,

Do not install mats in walls, under walls or partitions, or in locations where they will be covered by floor hugging furniture or fixtures.

### **CAUTION:**

Flooring materials must be rated for use with electric floor warming system.

Do not place futons, beanbag chairs, or similar furniture on heated floors. Furniture must have a one inch clearance from the floor.

# **SECTION 1. Introduction**

The FloorHeat™ Peel & Stick Radiant Heat mats are a unique floor heating system with anti-fracture membrane installed under thin-set installations of tile, stone, and marble. Completely unseen, FloorHeat combines easy release liner installation with anti-fracture protection to provide warmth and comfort to tile, stone, and marble. FloorHeat is a safe and efficient electric floor warming product for interior applications. It cannot be used for exterior snow melting applications. It is intended for installation below tile, stone, marble, and other masonry flooring materials in residential and moderate commercial installations.

FloorHeat Peel & Stick Radiant Heat can be used to heat a room as well as to warm the floors. Refer to "Heat Loss Calculations" on page 4 for further information. FloorHeat is designed to deliver 12 watts per square foot. The floor temperature attainable is dependent upon how well the floor is insulated, the temperature of the floor before start up, and in the case of uninsulated slab applications, the thermal transfer of the underlying materials. FloorHeat's efficiency is maximized with a well insulated sub floor.

# **Features:**

- 0.03" thick and easy to install
- 3/8 inch crack isolation
- Draws 12 watts per sq. ft.
- Produces 41 BTUs per sq. ft., providing even heat throughout
- Standard 5-foot and 10-foot length kits available in 18" and 36" widths
- 120 Volt
- Controlled by an available thermostat with Class A GECI
- Warranted to be free of defects in manufacture for a period of 10 years.

### **How to Use This Manual**

This manual is organized into four sections:

- Designing The Installation Installation
- Inspection and Testing •Operation

### **Before You Begin**

- FloorHeat Peel & Stick Radiant Heat should be installed on properly prepared stable subfloors. Do not use glue, nails, or other mechanical fasteners
- FloorHeat Peel & Stick Radiant Heat must be installed on a dedicated 20 amp circuit. Do not connect lights, outlets, or any other electrical device to any branch circuit used with the FloorHeat.
- All wiring, fuses and/or circuit breakers must conform to National Electrical Code requirements.
- Maximum thermal resistance permitted above FloorHeat Peel & Stick Radiant Heat is R-1.5.
- Materials which may not contact FloorHeat Peel & Stick Radiant Heat include any vinyl or linoleum floor coverings.
- All wiring must run through conduits to junction boxes.

### 1. Introduction Continued

### **NEVER Do the Following:**

- Never bang a trowel on the mat or heating wire to remove excess mortar from it.
- Never attempt to repair FloorHeat<sup>™</sup> Peel & Stick Radiant Heat. If it is damaged, call 1-888-265-5455 for instructions before proceeding.
- Never install in wet areas, such as showers.
- Never install without the floor sensor.
- Do not install the mats in any walls.
- Never install mats under cabinets or other built-ins. Excessive heat will build up in these small spaces, and the mat can be damaged by fasteners (nails, screws, etc.) used to install built-ins.
- · Never install under nail down wood flooring.
- Never remove the nameplate label from the power leads.
- Never allow solvent based products such as sealers or sealants (including silicone) to come in contact with the membrane.
- Never install mats on floors where hydrostatic or moisture vapor rate emissions exist above 4 lbs per 1,000 square in 24 hours per the Calcium Chloride test method.

### ALWAYS Do the Following:

- Protect the circuit supplying power to the FloorHeat Peel & Stick Radiant Heat mats with a ground fault circuit interrupter (GFCI).
- Install floor sensor.
- Completely cover the heating mats and factory connections in mortar (tile and stone) or glue (wood and LVT that is 4mm or thicker) or self-leveling underlayment (laminate and non-masonry) materials.
- Refer to the TCNA Handbook recommendations and ANSI references for proper substrate needed for thinset tile installations and for recommendations on proper Movement Joints within the plane of the tile per Detail EJ-171.

# **SECTION 2. Designing the Installation**

To select the proper size heating mat(s) for your application, measure the area to be heated and determine the heating mat widths and lengths to fit the clear inside dimensions (wall to wall, etc). It is important to allow up to 5" of clearance around the perimeter of the room and from any baseboard heating or permanent fixtures to allow the mats to fit without touching adjacent vertical surfaces or overlapping. Accurate dimensions are required for the proper size selection.

For installations over wooden subfloors, check floor thickness and for any deflection. Do not install FloorHeat<sup>™</sup> Peel and Stick directly over the top of OSB subfloors. At least 1/4" thick cement backer board should be used over wooden subfloor.

# NOTE:

The heating mats can only be cut to fit length. Do not cut or notch to fit around any obstructions or penetrations such as door openings or floor registers.

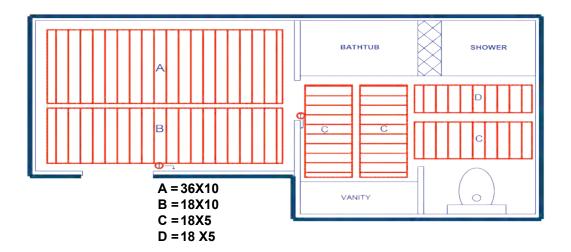

### **Sketch the System Layout**

A sketch of the area to be warmed, including the mat locations and associated wiring, is recommended to make installation and ordering as smooth as possible. See the example sketch below.

### **Multiple Unit Installations**

Installations with multiple heating mats will require a junction box to gang the connections together. If a junction box is required, it should be located directly beneath the thermostat, 12" to 18" above the floor. The total number of mats used in a single circuit is limited to 15 amps

When specifying multiple width heating mats for the same area, make sure that the total power required does not exceed the total power of a single circuit. Add additional 20 amp circuits as required for proper electrical supply to the installation

# 2. Designing the Installation Continued

### **Sketch the System Layout**

The fuse or circuit breaker used must be rated for a maximum of 20 amperes (no greater than 15 amp load). If a lower rated fuse or circuit breaker is used, it must be rated at least 25% greater than the heating system load attached to it. If an area requires 15 amps or more, additional branch circuits may be used, each having its own

overcurrent protection. These branch circuits may all be controlled by a single thermostat if it is used with a system of electric relays or power modules. The National Electrical Code specifies that each branch circuit used in conjunction with a heating system must be for the exclusive use of the heating system. Do not connect lights, outlets, etc. to any branch circuit used with FloorHeat™ Peel & Stick Radiant Heat.

The installation of this heating product and listed components shall be in accordance with Article 424, of the National Electric Code, ANSI/NFPA 70. All electrical connections should be made by a licensed electrician.

### **Thermostat Requirements**

### **Locating the Thermostat**

Thermostats are usually located near the power leads. However, they can be located almost anywhere, because the power leads and the sensor wire can be routed to electrical junction boxes and extended to a location outside the heated room (such as a utility room or basement). Location of the thermostat should be approximately 60" (152 cm) above the floor on an inside wall, near the center of the room to allow the connection leads to reach. A 3" deep box is recommended for the thermostat.

### **Heat Loss Calculations**

For installations where FloorHeat<sup>™</sup>Peel & Stick Radiant Heat is the primary heat source, a heat loss calculation must be performed. For additional help, a heat loss calculator can be performed by a heating & ventalation specialist. The building professional must determine if the output of FloorHeat is enough heat to match the heat loss of the structure. Make sure that all sources of heat loss (transmission, infiltration and radiant) are taken into account.

A separate heat loss calculation must be done for each enclosed area (room, etc.). A separate control device must be

included for each enclosed area. Include a recovery factor of at least 20% more than the minimum calculated heat requirement to cover unforeseen circumstances.

Some heat loss methods, particularly those designed for gas or oil based systems, provide their answers in BTU's Per Hour. To convert BTU's Per hour to WATTS, multiply each area's total amount of BTU's by 0.293. All wiring, fuses and/or circuit breakers must conform to National Electrical Code requirements.

The product must be installed using a thermostat which is approved by the manufacturer.

For a list of approved thermostat devices, refer to our website: www.getFloorHeat.com USE OF ANY OTHER THERMOSTAT OR CONTROL DEVICE WILL VOID THE MANUFACTURER'S WARRANTY.

# SECTION 3. Installation

### **Preparing the Job Site**

- 1. Ensure the job site is clean before working with the FloorHeat<sup>™</sup> Peel & Stick Radiant Heat, free of any nails, screws and other sharp debris that could damage the mats.
- 2. Tile flooring installations must meet subfloor requirements set forth by the Tile Council of North America (TCNA).

# CAUTION: 📤

Make sure that the jobsite is neat and clean before working with the mats. Nails, screws, and other sharp debris can damage the mats creating a potential shock hazard. Any mats which become torn or otherwise damaged must not be used.

Use copper ONLY as the supply conductor. Type NM and NMC non-metallic sheathed cable is not suitable for installing this product.

### NOTES:

The installation of this heating product shall be in accordance with the manufacturer's instructions. Improper installation can result in mats that do not work, poor heating, and can void the manufacturer's warranty.

Heating mats should not be installed at or below 32°F (0°C).

Installations over non-insulated concrete subfloors may require a longer period of time to adjust to your desired temperature.

This equipment shall be installed only by qualified personnel who are familiar with the construction and operation of the apparatus and the risks involved.

Installation of this product and listed components shall be in accordance with Article 424, of the National Electrical Code, ANSI/NFPA 70. Listed to UL1683.

### What You Will Need

- FloorHeat<sup>™</sup> Peel & Stick Radiant Heat mats
- Thermostat: An approved thermostat
- GFCI Breaker (if not part of the thermostat)
- Junction Boxes: Minimum of two boxes required for each room or area. One box (2x4 inch) required for thermostat, one box (4x4 inch) required for electrical connections.
- Tools: Digital ohm meter (multi-meter), wire stripper, screw driver, wood chisel, knife
- Tile installation products (3/8" x 1/4" or greater plastic trowel, mortar, backer board, tile, etc.)
- 12/2 Romex

# **CAUTION:**

RISK OF ELECTRIC SHOCK AND FIRE. DAMAGE TO SUPPLY CONDUCTOR INSULATION MAY OCCUR IF CONDUCTORS ARE ROUTED LESS THAN 2 INCHES (51mm) FROM THIS HEATING PRODUCT. REFER TO INSTALLATION INSTRUCTIONS FOR RECOMMENDED MEANS OF ROUTING SUPPLY CONDUCTORS.

# **Electrical Installation**

### Step 1. GFCI Installation

FloorHeat<sup>™</sup> Peel & Stick Radiant Heat mats must be protected by a Class A ground fault circuit interrupter (GFCI). This can be done either by the internal GFCI in the thermostat (as long as it directly controls the mat), or by a GFCI protected circuit breaker. Never double protect the circuit with a GFCI at the thermostat and at the circuit breaker box. Follow all local building and electrical codes. Typical Amperage Requirement: 120 VAC FloorHeat: 0.1 amps per square foot, or 10 amps per 100 square foot of mat.

### Step 2. Install Additional Power Modules

Depending on the amperage requirements of the mat(s), one or more secondary power modules may be required. A power module is a relay or non-controlling thermostat and must be treated as such. It allows the expansion of the controlled area that the main thermostat can control, but it must be placed on it's own 20 amp dedicated circuit and do not load the thermostat control with more than 15 amps. The National Electrical Code specifics that each branch circuit used in conjunction with a heating system must be for the exclusive use of the heating system. Do not connect lights, outlets, etc. to any branch circuit used with the FloorHeat Tile Heat.

### **Step 3. Install Electrical Boxes**

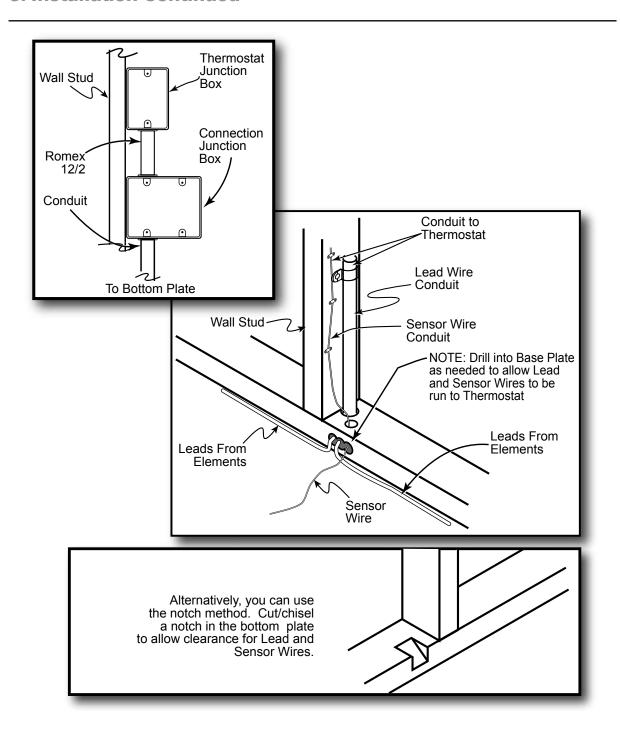

Install Junction box for the control device (thermostat) according to the manufacturer's instructions. This box should be located, unobstructed, on an inside wall so that the device reads accurately.Install a 4x4 inch junction box for making electrical connections between the mats and thermostat.

### Step 4. Bottom Plate Work

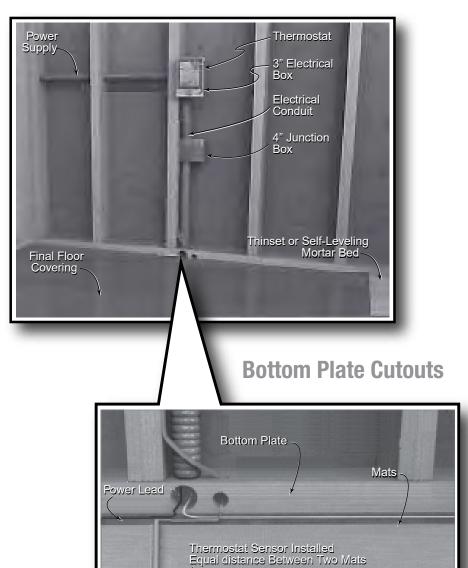

Drill or saw holes at the bottom plate. One hole is for routing power leads or conduit and the other is for the thermostat sensor. These holes should be directly below the electrical box(es). It is recommended that you drill or saw holes at the bottom plate. You may also use a notch technique as an alternative.

### Step 5. Install Power Lead Conduit

Route the power leads from the thermostat down the wall cavity through opening in the bottom of plate to connect the mats.

# **Typical Installation**

Shows FloorHeat™ Installation below final floor covering.

### Step 6. Install Thermostat Sensor

\* if thermostat comes with floor sensor

A floor sensor comes with the recommended thermostat control. The sensor wire can be installed without a conduit or in a conduit separate from the electrical power leads if conduit is required by code. Open a second knockout in the bottom of the thermostat box. Feed the sensor (and conduit, if including) through the knock-out, down the wall cavity, through the opening in the bottom plate. Temporarily tape the sensor to the slab or subfloor in a location approximately 6" to 12"

from the wall---final location of sensor after mat installation will be taped down at the edge of or in between two mats so that the sensor is not directly above a heating mat. Abut the sensor up against the side of the mat for best results. **NOTE:** The sensor is located in the thermostat packaging.

### Step 7. Rough in the Wiring

Install appropriate electrical wire (conductor) from the power source and breaker protection to the thermostat following all codes. Leave 6" to 8" extra wire at the thermostat box.

# **Installing the Mats**

### Step 1. Inspect and Test Heating Mats

Verification that the heating mats were received in operable condition is important prior to installation. When the heating mats are removed from the shipping box, test the resistance using ohm meter and record the information. If the resistance reading varies more than  $\pm 3\%$  from the recorded readings on each mat, do not install the mat and contact your supplier for assistance.

### Step 2. Preparing the Stable Sub-floor

Clear the floor of all debris, nails, etc. so the floor is smooth, clean and dry.

It is EXTREMELY important to verify the resistance measurements for each mat and to record the readings on the system checklist (see page 16). If a defective mat is adhered to the floor it can be very difficult to remove it.

The heating product shall not extend beyond the room or area in which it originates.

The heating product is not to be installed in walls.

It is very important that the mats be installed ONLY after the sub-floor is complete and stable.

Adhering the mats to an unstable floor can result in damage to the mats and will void the manufacturer's warranty.

# **Cutting & Customizing**

### Step 1

# **Cut the mat to the required length**

It is important to only cut BETWEEEN the Black Stripes. Do NOT cut into them as this will cause the GFCI to trip.

### Step 2

### Terminate the end with green insulating discs

Cut back one black heat stripe from both ends of the panel making sure not to cut into black stripe. Fold one Kapton Insulating Disk, (Green dots supplied in kit) on the two silver bus bar endings on the panel on the opposite side from the thermostat location. Green insulating disk must be folded over the top and bottom of silver bus bar. Make sure the green kapton disk is covering the bus bar and the black ink area exactly as in the figure.

Step 3 Sealing the heater by removing the liners.

Fold back and crease the top "flap" on each end of the heating panel(s).

Peel back the bottom release liner on the inside of the flap and adhere the heating element by pressing down firmly.

Once the heating element is adhered to the bottom of the flap carefully peel back the upper release liner and press down to seal the edges of the membrane.

### MAKE SURE TO PRESS OUT ANY AIR BUBBLES AS YOU ARE ADHERING THE TOP FLAP TO THE BOTTOM.

Proceed with the rest of the steps for installation on the following pages. Check the resistance reading again to the new customized size.

### Step 3. Laying the Mats

Connection leads from the mats are 15 feet long, and can be cut to desired length to connect at the junction box. The heating mats should be laid so the connection leads are running to the wall of the room where the thermostat/junction box is located. The following steps will guide in the installation of the mats:

- With the release liner still on, position all the mats into place. Make sure the leads are within reach of the junction box and that there are no obstructions or floor penetrations in the way. Make sure the position of ALL mats is satisfactory before the next step.
- 2. When all the mats are in proper position, roll the end with the connections back far enough to peel back approximately 12" (30cm) of the release paper to expose a portion of the adhesive surface.
- 3. Press this exposed section of the mat onto the surface and then roll the other end back to the point where the release paper was removed.
- 4. Begin pulling the release liner off and hand smooth the mat into position as it unrolls to achieve a positive bond while avoiding trapping air bubbles.
- 5. For adjacent mats, follow the same procedure starting with alignment of the side by side mats in a butt joint fashion. Do not overlap mats.
- 6. Peel off quick release liner and set mat in place, leaving clearance to walls or partitions at the connector end for wiring and final connections.
- 7. Make sure to seal the flaps on each side of the mat(s). See page 10, Step 3 for directions.

### NOTE:

It is important to take care in the placement of the heating mats, as once the adhesive side of the heating mat comes in contact with the stable subfloor it will provide a tenacious bond, and will be very difficult to move.

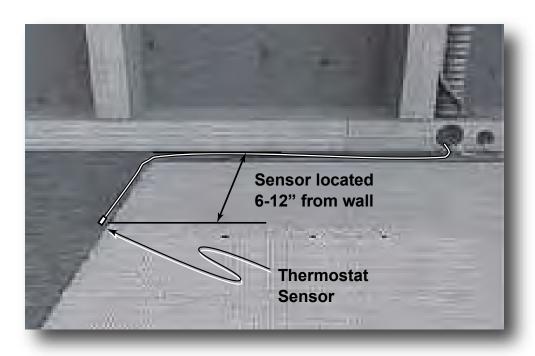

### **Step 4. Install the Thermostat Sensor**

As the mats are installed, locate the thermostat sensor probe. Sensor probe can be held in position with a small amount of tape. The sensor should extend approximately 6" to 12" from wall adjacent to the mat shown. Be careful not to locate the sensor near other heating sources such as a heating duct below the floor.

### **Step 5. Connect the Electrical Leads**

Now, depending upon your wire lead installation, route the lead wires from each of the individual mat along the base of the wall and up to the junction box.

Depending on the thickness of the mortar bed, you may also need to chisel a space under the point where the wires connect with the mat in order to recess the connection. Be extremely careful not to damage the heating mat or connection.

### NOTF:

The thermostat sensor is thicker than the heating mat. If thinsetting over backer board or slab, saw a groove to recess the sensor to the level of the mat. Use duct tape to secure the sensor in the groove. Do not damage the sensor. Ensure the sensor is set down so it is level with the mat and not on top of the mat.

# **SECTION 4. Inspection and Testing**

A visual and electrical check must be performed on the heating mats prior to activation.

NOTES:

Record the resistance measurements of each mat after installation. These measurements should be compared to the readings recorded on the product label for each mat to confirm a successful installation. These measurements are required for warranty registration.

If a mat fails the resistance check, it must be retested after any corrective actions.

### **Visual Inspection**

Also perform a visual check to look for any signs of damage to the mat or electrical leads that may have occurred during installation. When visually checking the mats, look for any signs of damage, wear, or scratching that might have occurred during installation. If any portion of a mat appears damaged, replace the entire mat. If damage is found, call the technical hotline at 1-888-265-5455 or email info@getFloorHeat.com for advice and/or replacement assistance.

### **Continuity/Resistance Check**

Following installation, a second resistance check across the supply leads of each mat using a digital ohm meter must be made to detect any short or open circuits that may have resulted from the installation process. If the resistance check is the same as the original reading shown on the mat label, the mat is installed properly and no further testing is required.

If the resistance readings are not within  $\pm 3\%$  of the indicated value on the mat then call 1-888-265-5455. If the resistance is ZERO: This indicates a short circuit. Check the path that the wiring is taking and make sure that no wires are pierced or otherwise damaged. Mats with damaged non heating leads must be replaced.

				Resistance (0hms)
Product Number	Dimensions	Amps	Watts	Low Limit
IH/AF 18-3	18" Wide x 3' Long	0.35	42.22	341.03
IH/AF 18-5	18" Wide x 5' Long	0.61	73.5	195.92
IH/AF 18-7	18" Wide x 7' Long	0.87	104.78	137.44
IH/AF 18-10	18" Wide x 10' Long	1.26	151.69	94.93
IH/AF 36-3	3' Wide x 3' Long	0.79	94.55	152.3
IH/AF 36-5	3' Wide x 5' Long	1.37	164.59	87.49
IH/AF 36-7	3' Wide x 7' Long	1.96	234.62	61.38
IH/AF 36-10	3' Wide x 10' Long	2.83	339.67	42.39

### **Test for Heating**

- 1. Install control device and connect to electrical panel box. Install and wire the control device according to manufacturer's instructions.
- 2. Wire the heating mat(s) to junction box, and wire the junction box to the thermostat according to the manufacturer's instructions.
- 3. Turn on the breaker and adjust the thermostat so that it is calling for heat. Refer to the installation sheets provided with the controls for proper setting. After all controls are installed, do not energize the system, except to briefly test operation of all components.
- 4. After the system has been on for several minutes, run your hand over the heating mats to ensure that they are warm. The system should now operate as designed. Please leave the instruction sheets for the thermostat in a safe place for future reference. The heat is a gentle heat and will only heat up slightly until the floor is installed. It will not get hot to the touch. Just a slight warm feeling.
- 5. Once heating has been verified, turn off the system.

Ensure that breaker supplying power to the heating mats has been turned off before making electrical connections. Flooring materials must be rated for use with electric floor warming systems.

### NOTE:

After testing, do not turn on the system for 28 days to allow the thinset and grout to cure. Failure to do so may compromise installation and cause cracking or other damage.

### **Final Floor Installation**

The mats are now ready for tile installation using a latex modified thin-set with a maximum thickness of 3/8" after the tile is embedded. It is recommended to use a plastic notched trowel to help prevent damage to the heating mat surface. Take care during the troweling process to not nick or cut into the mat, or cold lead wires.

A continuous circuit monitor alarm can be used to alarm you if the cold lead wires have been cut during the installation. Damaged cold leads can lead to GFCI tripping issues and/or the mat not working. It is best to be sure you haven't damaged the cold leads before the floor is installed.

We recommend working with professional flooring installers to make sure proper materials are used and proper installation techniques are followed. Install the floor covering according to the manufacturer's instructions.

Use a digital ohm meter to check the rsistance of the mat(s) and sensor(s) before, during and after the installation

of the finished floor covering. Record the reading of Heat on the Heating System Checklist & Warranty Registration Form, continuing to check for short circuits caused by nicks or pinches. If possible, take photographs of the mat installation before installing the flooring.

The mats will generate a low, comfortable warmth. If area is cold during installation it is likely that the mats will not seem warm so you will have to rely on the electrical tests. If the mats do not become warm, double-check all wiring and again perform the electrical tests above (after turning off power at the breaker).

### Tile, Stone, and Marble Installation

When installing Perfectly Warm Radiant Floor Heat under tile, stone, or marble, we highly recommend Tile Council of North America (TCNA) guidelines or ANSI specifications for minimum standards of installation. We recommend latex-modified or epoxy modified mortar and grout, instead of water-based multi-purpose materials.

Use full coverage of thin set with no voids. Spot Bonding (Dot Mounting), and leaving large voids, is unacceptable and will lead to a crunching noise where the heat mats are installed. Thin set must be installed following TCNA/ ANSI standards. Spot bonding of tile that only gives partial contact leaving large voids is not an acceptable method for tile installed on floors with thin-set mortars.

Select the proper size PLASTIC trowel for the installation of tile or stone. We recommend a minimum 3/8" x 1/4" trowel. This trowel works best for most 1/4" tile.

If you need more information on tile installation, contact TCNA at (864) 646-8453 or visit their Web site at www.tileusa.com.

### **Place Caution Stickers**

Apply caution stickers provided with mats in appropriate locations, as shown below.

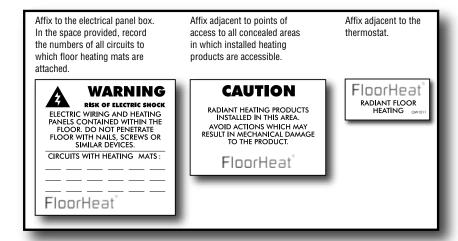

When installing tile, stone or marble over Perfectly Warm Radiant Floor Heat, it is important to maintain a thin-set thickness of 3/8" or less after the tile is embedded, even if the mortar manufacturer allows for thicker installations. Thicker mortar beds can potentially provide sufficient moisture to cause some natural stones to warp or crown.

Flooring materials must be rated for use with electric floor warming system.

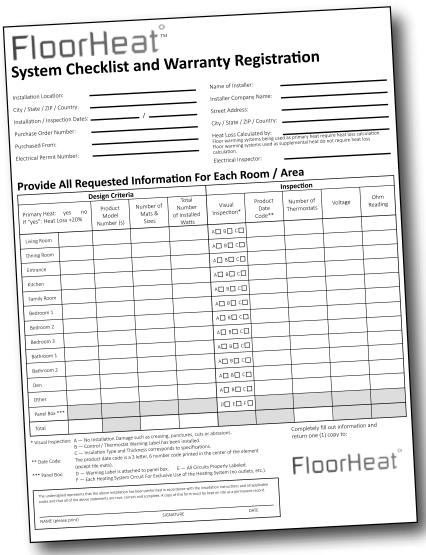

Never bang a trowel on the mat to remove excess mortar from the trowel. This could damage the mat.

### **Documentation**

The System Checklist and Warranty Registration form records vital information about your FloorHeat<sup>™</sup> Peel & Stick Radiant Heat installation. Fill out all requested information on BOTH copies. One copy is returned to the manufacturer to register the installation, and the second copy is for the homeowner's records.

This manual must be attached to the service panel so that it is easily accessible to the homeowner and any repair technicians.

### **Troubleshooting**

The heating elements used in the individual FloorHeat<sup>™</sup> Peel & Stick Radiant Heat mats for under tile, stone or marble are laminated within the membrane. All Heating Element connections and terminations are crimped, insulated and well protected within the lamination making one of the most durable heating mat systems on the market. Problems with the system operation that are the result of a damaged or modified mat are not covered under warranty.

It is important that this manual be followed during the installation procedures and that all warnings be followed. Wiring should be performed by a licensed electrician in accordance with all applicable building and electrical codes during the installation as well as for any trouble shooting of the system. Failure to do so voids warranty.

The individual mats provided with each system have ohm readings written on the mat. It is important that these readings be checked, verified and recorded upon receipt of the product and again after the mats have been installed (prior to tile installation). A test of the system to make sure all elements are heating properly is recommended prior to installation of tile. The manufacturer will not be responsible for the replacement of the floor tile if the system operation was not checked and verified prior to installation of the tile.

### **Corrective Actions**

Verfiy power is connected to the system and that the GFCI is not tripped at the thermostat or the circuit breaker is not tripped at the main service panel. Ensure the right voltage is applied to the purchased mats.  Verify that all leads from all mats are connected together to power source. Areas within a mat that are not heating could be the result of damage and will require the mat to be replaced.  Installations on concrete slabs can require a period of several days to warm up to desired temperature
that are not heating could be the result of damage and will require the mat to be replaced.
installations on concrete slabs can require a period of several days to warm up to desired temperature
especially if the slab is uninsulated in a cold climate. Set Thermostat to maximum heat to allow system to continue running until it becomes warm. Then adjust thermostat down if needed. Verify floor temperature sensor is not directly on top of heating element causing the thermostat to shut off more frequently.
Adjust thermostat
Verify that correct voltage is being applied to heating elements rated for 120V Service.
Verify that thermostat has not been bypassed.
If necessary, reposition floor temperature sensor.
If the thermostat trips and will not re-set, check the following:
System MUST be on a dedicated branch circuit separate from any other electrical devices which could overload the circuit or create interference issues resulting in the GFCI to trip.
Check electrical connections to verify leads from all mats are wired in parallel (black to black / white to white / red to red) and all connections are tight and properly insulated against grounding.
Check leads from mats to verify no nicks or cuts have occurred during construction that may be causing a short. For further assistance with GFCI problems call 1-888-265-5455.
Refer to the thermostat manufacturer's documentation.

# **SECTION 5. Operation**

### **How the System Works**

The radiant heat warms your floor, and provides clean, even heat throughout the room by uniformly warming the objects while providing thermal comfort for occupants. There is no need to directly over-heat the air. This is the opposite of how conventional forced hot air or baseboard heating systems work. In other types of heating systems, the large mass of air in a home is heated while the objects (and especially the outside walls) remain relatively cool.

### **Operating the System**

Operation of Variable is the same as other heating systems. Just set the thermostat to the desired temperature and the system warms your finished floors and the room. Keep the following things in mind:

- Since each room has its own thermostat, you can individually tailor room temperatures based on activity or occupancy. For instance, if a room is rarely used, you can set its thermostat lower to conserve electricity.
- Before you leave your home for an extended period of time, lower the temperature settings to reduce the power consumption.
- Setting the thermostat to a very high temperature will not make a room warm up faster it will merely result in the occupants being too hot when the set temperature is ultimately reached.
- High airflow velocities (from open doors or windows or extreme drafts) may make occupants feel cold.
- Routinely test thermostats according to their manufacturer's instructions.

### **Precautions**

Although the Variable system requires no maintenance, there are some things that must be taken into account to ensure that the systems are not damaged. Additional information for remodeling or repair is available by calling 888-265-5455.

- Hitting the electrically conductive portions of a heating panel can result in a potentially dangerous electric shock.
- Piercing the elements will damage them, may present fire hazard and may cause electrical shock.
- If a portion of the floor surface must be replaced, inspect any exposed heating mat for damage that may have occurred while removing the flooring. See page Variable for complete instructions on inspecting the mats.
- Never cover any heated portion of a floor with walls or other permanent structures. This may trap heat and create a potential for overheating.
- If new walls or partitions are added over heating portions of a new floor, the heating mats located under the walls or partitions mst be disconnected from power to avoid a potential for overheating.

# 5. Operation Continued

### **Repair/Remodel Information**

Before performing any remodeling work near a heated floor, carefully read Sections 1 through 3 of this manual. These sections detail the clearances, procedures, and materials involved as well as the testing procedures required to ensure system safety.

This information must be read and understood by all repair and remodeling technicians who will be working on the house structure in the area of an installed FloorHeat™ Peel & Stick Radiant Heat or main electrical systems. Failure to follow these guidelines may result in a risk of electric shock or fire hazard.

When installing any other materials on or near a heated floor, ensure that no heating elements are punctured by nails, screws, etc.
